A block diagram is a means of modeling a system by breaking it down into subsystems each represented by a block. The overall response of the system is determined from a knowledge of the transfer functions of the blocks. Arrows are used to represent the direction of signal flow. Blocks are used to represent

we discuss the use of block diagrams to model systems that consist of many components. We discuss the elements of a block diagram and principles for modeling. systems using these elements. Also addressed is how to use block diagrams to. obtain the transfer function of a system, thereby enabling the analysis of BIBO.
