### Direct Monte Carlo Simulation Of

Direct Simulation Monte Carlo ( DSMC) method uses probabilistic ( Monte Carlo) simulation to solve the Boltzmann equation for finite Knudsen number fluid flows. The DSMC method was proposed by Prof. Graeme Bird, Emeritus Professor of Aeronautics, University of Sydney. DSMC is a numerical method for modeling rarefied gas flows, in which the mean free path of a molecule is of the same order (or greater) than a representative physical length scale (i.e. the Knudsen number  $Kn$  is greater than 1).

The simulation of e-beam scattering in structure implemented Direct Monte-Carlo (DMC) algorithm with discrete energy loss model . Elastic electron scattering in PMMA and Si was simulated using Mott elastic differential cross-sections , while different models were applied for inelastic process in PMMA and Si.

SPARTA is a parallel DSMC or Direct Simulation Monte Carlo code for performing simulations of low-density gases in 2d or 3d. Particles advect through a hierarchical Cartesian grid that overlays the simulation box. The grid is used to group particles by grid cell for purposes of performing collisions and chemistry.

Monte Carlo simulation is perhaps the most common technique for propagating the uncertainty in the various aspects of a system to the predicted performance. In Monte Carlo simulation, the entire system is simulated a large number (e.g., 1000) of times. Each simulation is equally likely, referred to as a realization of the system.

The Monte Carlo simulation is a probability model which generates random variables used in tandem with economic factors (expected return, volatility — in the case of a portfolio of funds) to predict outcomes over a large spectrum. While not the most accurate, the model is often used to calculate the risk and uncertainty.

### **Monte Carlo method - Wikipedia**

Monte Carlo simulation (also known as the Monte Carlo Method) is a statistical technique that allows us to compute all the possible outcomes of an event. This makes it extremely helpful in risk assessment and aids decision-making because we can predict the probability of extreme cases coming true.
