What the Heart Keeps by Rosalind Laker - Goodreads

The heart is an organ about the size of your fist that pumps blood through your body. It is made up of multiple layers of tissue. Your heart is at the center of your circulatory system. This system is a network of blood vessels, such as arteries, veins, and capillaries, that carries blood to and from all areas of your body.

How the Heart Works | NHLBI, NIH

Normal heart rhythm is often called normal sinus rhythm because the SA (sinus) node fires regularly. AV node (atrioventricular node). The AV node is a cluster of cells in the center of the heart between the atria and ventricles, and acts like a gate that slows the electrical signal before it enters the ventricles. This delay gives the atria ...

Heart & Blood Vessels: How the Heart Beats

The heart sends blood around your body. The blood provides your body with the oxygen and nutrients it needs. It also carries away waste. Your heart is sort of like a pump, or two pumps in one. The right side of your heart receives blood from the body and pumps it to the lungs.

Your Heart & Circulatory System (for Kids) - Nemours ...

The heart is an organ found in every vertebrate.It is a very strong muscle. It is on the left side of the body in humans and is about the size of a fist. It pumps blood throughout the body.It has regular contractions, or when the heart squeezes the blood out into other parts of the body... A Tomato a Day Keeps the Heart Doctor Away | Everyday Health

Heart. According to the Bible, the heart is the centre not only of spiritual activity, but of all the operations of human life. "Heart" and "soul" are often used interchangeably (Deuteronomy 6:5; 26:16; Compare Matthew 22:37; Mark 12:30 Mark 12:33), but this is not generally the case. The heart is the "home of the personal life," and hence a man is designated, according to his heart, wise (1 ...

Right-sided heart failure usually leads to an accumulation of fluid in the abdominal cavity, the liver, and/or the limbs. Left-sided heart failure occurs when the pumping mechanism on the left side of the heart fails. In this instance, the blood returning from the lungs to the heart backs up and fluid accumulates in the lungs.
